

Junkshon Migration Readiness Assessment

Focused and high-value workshop that assesses enterprise cloud migration readiness and defines key enabling actions to deliver transformational cloud business benefits

Junkshon is transforming the way in which enterprises design, plan and execute cloud migrations, dramatically compressing the timeframes associated with legacy methods by delivering smart, high-quality results in weeks, rather than months. **Junkshon** combines AI-based platform capability with world-class consulting skills to help you realise the full potential of your cloud migration programme. We focus on the full-range of cloud business drivers and benefits, including cost reduction, increased agility, scalability, team productivity, data centre rationalisation, improved technical debt, innovation, application modernisation and digital transformation.

The **Junkshon Migration Readiness Assessment (MRA)** revolves around a focused and interactive workshop where your readiness survey information is reviewed and discussed in depth to determine necessary actions and next steps. **Junkshon** has created comprehensive migration readiness surveys based on best practice cloud migration thinking, aligned with leading cloud provider content, tools and methodologies. Surveys are created in the **Junkshon Platform** with appropriate tailoring to reflect your specific circumstances and needs.

Our standard MRA surveys cover:

- People, organisation and governance
- Operating model
- Existing application and IT infrastructure workloads and in-flight projects
- Security and compliance
- Customer project methodology.

Insight-driven MRA surveys

Following completion of surveys, **Junkshon** leads a half-day workshop where we jointly review your survey responses to create a consolidated report. This includes maturity status, key findings, recommended actions and next steps, including suggested projects to accelerate cloud migration projects and associated business benefits.

Focus areas and associated next steps typically include:

- Governance projects, such as setting up change management processes
- Potential fast track and high business impact migration projects
- Potential application / business service deep dives
- Operations, planning and sourcing reviews.

Junkshon MRA – key benefits at a glance:

- Thorough readiness review based on migration best practice and **Junkshon** experience
- High-value migration readiness maturity status report, including organisation readiness strengths and weaknesses
- Overriding focus on enabling cloud migration and associated business benefits
- Recommended action plans and next steps focused on resolving the identified gaps, so you can migrate at scale and pace without being held back by foundational readiness issues
- Delivery readiness ability insights and associated support needs.
