

junkshon Viewpoint Paper

junkshon enables rapid analysis and assessment of your applications and infrastructure to inform your Cloud strategy and help you make the right decisions and move faster.

junkshon Application

junkshon takes a different approach to application and infrastructure workload assessment for migration to the cloud or between data centres.

WHAT IS WRONG WITH THE CURRENT APPROACH

Currently, when customers are looking to move to a cloud platform be that Private or Public, they typically engage a consulting partner that will perform a manual assessment collecting information about your applications and infrastructure.

This approach has been used for many years and typically takes time and costs a lot of money, once the assignment has finished the information collected is out of date and not good enough to inform a strategy, infrastructure or application modernisation plan. The problem is even more significant in today's digital environment where technology options are changing so fast.

A DIFFERENT APPROACH

Instead of continuing to perform these manual assessments and deploying agents and local tools to collect information with today's AI-based technologies it is possible to extract value from existing enterprise data stores.

Using these existing data sources with Machine Learning algorithms and business intelligence tools and modern development frameworks.

junkshon has used these technologies to build a new way of analysing and building the modernisation plan for applications and infrastructure.

Using our AI engine and visual analytics we can:

- Analyse application & infrastructure
- Create technical weighting
- Target platform landing zone reports with migration methods architecture.
- Create rapid business case forecasts
- Develop migration programme plans
- Manage migration workflow, including technical and non-technical elements.

BENEFITS

- Faster benefits realisation
- Lower cost of cloud adoption and digital transformation
- Ability to perform what-if scenario modelling faster
- Generate code from our analytics platform that can be used to orchestrate the downstream processes

Our infographic illustrates how we can help you get started on your cloud journey faster, at a lower price and with reduced risk.
